

Total Lift Bariatric Bed - TLBB

The Big invention for Bariatric Patients and their Caregivers

Obesity has become an increasingly significant health care problem. While challenges and needs are well known in the healthcare industry and private market, solutions were very limited until now. As one of the most famous SPH researchers in the world has phrased it, "There is no safe way to manually lift a patient, even with multiple caregivers".

VitalGo is proud to introduce a new version of the **Total Lift Bed™** for bariatric patients which can lift a patient weighing up to 1000 Pounds (450 kg.).

The revolutionary design allows the bed to raise the bariatric patient/user to a fully standing position and all positions in between including chair positions. The operation can be done by the user himself at home, or by a caregiver in a healthcare facility, with just a press of a button. There are enormous benefits to this ability to raise a bariatric patient without any manual lifting.

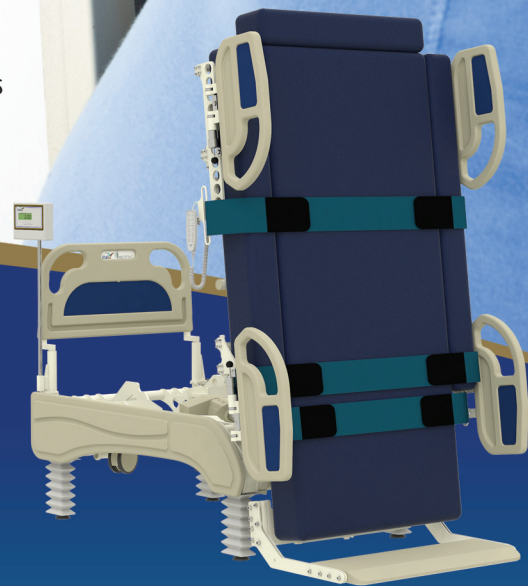

It is estimated that almost 20 percent of the adult U.S. population is obese, with approximately 5 percent of the population considered morbidly obese. There is a noticeable increase in the number of bariatric admissions to healthcare facilities. This trend presents a challenge to healthcare providers and facilities striving to provide dignified care that is effective and safe both to the patient and the provider.

Morbidly obese patients can have different body types, each presenting different treatment challenges. Weight distribution affects breathing, tolerance to movement as well as the risk of falling and sustaining unexpected injuries. Morbidly obese patients are at higher risk of skin breakdown resulting from impaired mobility, increased pressure due to weight and increased shearing forces. Nursing care for these patients pose significant challenges.

Moving a bariatric patient requires special training and equipment. The most basic tasks can be very difficult. Using this new bed technology allows the patient to participate in their recovery and keeps both caregiver and patient safe.

The Total Lift Bariatric Bed is ideal for:

- Hospitals
- Nursing Homes
- Assisted Living Facilities
- Long Term Acute Care Hospitals
- Home Use

Total Lift Bariatric Bed - TLBB

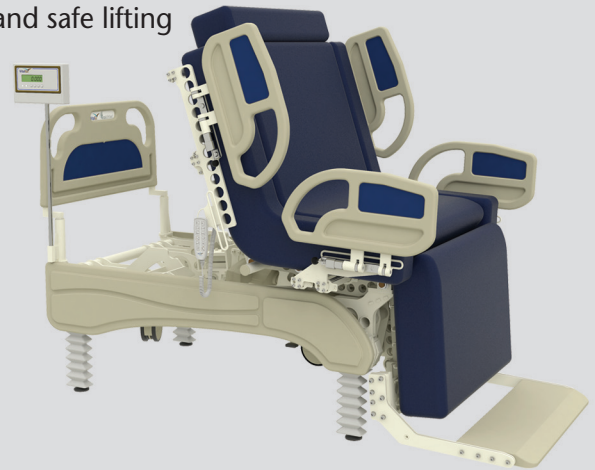

This revolutionary new product decreases the daily challenges to caregivers as well as patients, giving both the ability to lift and transfer with minimal risk and maximum dignity.

Total Lift Bariatric Bed is the best solution for safe patient handling and safe lifting by far, and can be combined with existing lifting and transferring devices for special situations, making those existing devices easier to use.

The **TLBB** can expand from a length of 80" (203cm) to 86" (218cm) and from width of 36" (91cm) to 48" (122cm), customizing the fit and safety for each patient.

The **TLBB** is compatible with any powered support surface including alternating or rotating low air-loss mattresses and fits the full extended size of the **TLBB**.

With just a press of a button you can bring a patient to any position desired

The Patented (pending) technology of the **Total Lift Bariatric Bed (TLBB)** moves the Foot Lifter™ towards the feet of the patient/user, and only after making contact will start tilting him, thus preventing any danger of sliding in bed. While the bed tilts, and upon reaching the proper angle the Foot Lifter™ will gradually move down so when the bed is in fully standing position the Foot Lifter™ will be parallel to the floor, allowing the patient/user to simply walk out of bed, with or without assistance. The patient can also be tilted for treatment, in any desired angle, for as long as needed. The Total Lift Bed can come with low air-loss mattresses in any grade.

The **TLBB** is perfect for many medical applications, such as – Early Mobility Therapy, Progressive Mobility Therapy, post orthopedic and surgical patients, physical therapy treatments and more. Early mobilization impacts patient outcomes in:

- Cardiovascular diseases
- Respiratory failure
- Urinary incontinence
- Skin breakdown, wound care and more.

The **TLBB** can safely bring the bariatric patient to the tilted/standing position and allow easy exit from the bed, improving patient medical condition dramatically.

The TLBB is the best solution for the obese patient's treatment

The **Total Lift Bed** has all safety features and is FDA and CE registered, conforming with the EN/ IEC 60601-2-38 and the Assessment Guidance to Reduce Entrapment.
